

## 0dB OLP Card

### Product Description

0dB OLP is a new generation of OLP for the transmission system, the use of new low-noise optical amplification technology, in the realization line protection of transmission system at the same time, can effectively improve system performance and improve maintenance margin.

### Product Features

- Improve system performance
- No insertion loss
- Short switching time
- High reliability

### Product Specification

Parameter	Index
Operation wavelength	1528nm~1566nm
Main insertion loss	≤0dB
Spare insert loss	≤3dB
Switch time	<50ms
Card width	2 standard slots
Connector type	LC/UPC
Maximum power consumption	45W
